

Support & Services

Consulting in Cleaning & Sterilization

During the years, the expertise acquired by DCI-Biolafitte, in terms of process know-how concerning the biotech and pharmaceutical field, is now offered to every one of our customers that have problems with their applications.

A "FIELD" APPROACHES...

Do you have production problems? Do you have difficulty finding the cause contamination? Have you developed a new process and your system won't entirely adapt?

Our specialists are happy to analyze with you about your systems concerning:

- Cleanability
- Sterility
- Mixing
- Transfer
- Waterproof
- Automation
- Control
- Process

We provide you with solutions to your problems via expertise on site following a precise schedule and methodology. Our specialists could eventually propose complementary tests in order to find the optimum solutions to your problems after the expertise.

... HIGHEST PERFORMER TOOLS

These services support translations into concrete solutions our expert's know-how:

-DCI-Biolafitte's drawing office, equipped with the most modern tools in terms of software and hardware.

-Test/Research/Optimization Laboratory including special equipment to measure and control mixing, agitation, drying, and cleaning techniques.

-Metrology departments equipped with special instruments for calibration data acquisition, control of measures, thermal mapping, and searching "cold points" for the sterility procedure.

The expertise results are part of a detailed report with the technical solutions to be implemented in order to meet with the user requirement specifications.
