

Support & Services

Installation & Commissioning

Considering the Installation & commissioning support, DCI-Biolafitte provides you with the best services through a complete team of high qualified mechanical and electrical technicians, but also automation & instrument engineers together with process specialists dedicated to your field of activity. The professionalism of our teams guarantees optimal performances together with the respect of previous delays in accordance with the most strenuous cGMP rules and agreements.

INSTALLATION

Our commissioning teams start their activity once the equipment is delivered to connect it all facilities in accordance with the approved installation & commissioning schedules

The expertise and the experience of our teams having the complete know-how of the equipment that was delivered guarantee you:

- The highest quality in term of traceability, manufacturing and control
- The conformity of your installations with the cGMP rules
- The conformity with the security and prevent plans

COMMISSIONING

Once the installation phase is finalized, our specialist teams take care of the different phases of qualification: conformity controls, electrical, mechanical, pneumatically preliminary tests, instrumentation tests, functionally and performance tests.

The entire test's procedure is performed taking in account the references of the Quality Instruction Manual of DCI-Biolafitte. The record of results is part of the customer documentation and could be used as a validation support.
