

Support & Services

Upgrading

Technologies, as your process procedures, are into a permanent evolution. DCI-Biolafitte is committed to provide you with the most modern tools for your new equipment and also to offer you a large choice of upgrading your existing systems.

RETROFITS

Your equipment becomes old and you have some difficulties to maintain the functionality of critical elements as the instrumentation, the software, or mechanical components? Would you like to update your equipment by integrating new functionality for your process?

Automation

DCI-Biolafitte, by its know-how in automation, is your partner to find solutions every time you need it. We have over 25 years experience and prepared specialized teams in instrumentation and industrial software dedicated to your applications. We can provide with the best tools in order to optimize your production processes, like new generation of PLC's and supervisory systems.

Mechanical

Do you find your mechanical components too old or no longer optimally related to your processes? We are able to study the best way to replace this with new generation systems which take in consideration new technologies in order to meet the most strenuous criteria of performances.

TECHNICAL EVOLUTION

You already have the supervisory control systems, WINPRGRESS or RHAPSODY type? DCI-Biolafitte provides you with new software and hardware modules, easy to be integrated, like:

- Forcing modules
- Recipe modules
- Graphic modules
- Batch modules
- Upgrade modules

Would you like to integrate new process lines, CIP units, and/or agitation and mixing systems? Our engineers are present and ready to find different solutions to meet your requirements.

QUALIFICATION

All modifications are tested and validated in accordance with the Quality Manual and Qualification/Validation protocols*.
